SUMMARY

B.Sc. Data Science graduate from Goa University (May 2026) seeking Data Analyst, BI Analyst, and Junior Data Scientist opportunities. Experienced in SQL, Python, Power BI, and Google Cloud through end-to-end analytics projects involving ETL pipelines, dashboards, forecasting, and machine learning. Open to relocation across India.

CORE SKILLS

SQL | Python | Power BI | Excel | BigQuery | ETL | Dashboard Development | Data Visualization | Business Intelligence | Statistical Analysis | Machine Learning | Forecasting | Streamlit

TECHNICAL SKILLS

Languages & Querying: SQL (joins, CTEs, window functions, ROLLUP, RANK, DENSE_RANK, OLAP), Python, R

Data Analysis & BI: Power BI, Tableau, Excel (Pivot Tables, Power Query, VLOOKUP/XLOOKUP), Streamlit, Plotly

Machine Learning & Statistics: Hypothesis Testing, A/B Testing, Cross-Validation, Cohort Analysis, RFM Segmentation, ARIMA, Logistic Regression, Random Forest, XGBoost, K-Means, SHAP, VADER

Cloud & Tools: Google Cloud Platform (BigQuery, BigQuery ML, Cloud Run, Cloud Storage, Cloud Build, Compute Engine), Docker, Git/GitHub, ETL Pipelines

PROJECTS

InsightX | E-Commerce Analytics Platform | GCP, BigQuery, Streamlit | github.com/harsh241005/InsightX

- Built an end-to-end ETL pipeline on GCP for 100K+ Olist transactions, transforming raw data into 7 BigQuery analytics tables for reporting and analysis.
- Developed BigQuery ML forecasting and segmentation models, including ARIMA+ for 6-month revenue forecasting and K-Means for 4 customer segments.
- Created a 6-page Streamlit dashboard covering executive KPIs, cohort retention, payment analytics, forecasting, and a what-if simulator; deployed using Docker, Cloud Build, and Cloud Run.

Socio-Technical Health Monitor | Dissertation | Python, NLP, XGBoost | github.com/harsh241005/Predicting-Ticket-Stalling...

- Built a 7-stage NLP pipeline for 916 Apache Hadoop tickets, cleaning 112,162 raw email-ticket links into a structured dataset using regex-based entity linking, VADER sentiment, and bot filtering.
- Trained Logistic Regression, Random Forest, and XGBoost models with leak-free ticket-level GroupKFold validation to predict stalled tickets.
- Developed a Streamlit dashboard with SHAP-based feature explanations; validated that a 7-feature communication model performed close to the 19-feature structural model.

Telecom Churn | Profit-Based ML Evaluation | Python, scikit-learn | github.com/harsh241005/telecom-churn-profit-evaluation

- Benchmarked Logistic Regression, Random Forest, and Gradient Boosting on IBM Telco data (7,043 customers, 21 features) using 5-fold cross-validation.
- Designed a profit-based evaluation framework using customer lifetime value and false-positive / false-negative cost trade-offs.
- Showed that the best AUC model was not the most profitable model, highlighting the importance of business metrics in deployment decisions.

Indian Automobile Enterprise Database | Oracle SQL, OLAP | github.com/harsh241005/automobile-enterprise-db

- Designed a normalized 19-table Oracle SQL schema for vehicle sales analysis and wrote OLAP queries using ROLLUP, RANK, DENSE_RANK, and window functions.
 - Created Python visualizations to analyze revenue contribution and model performance across companies and vehicle categories.
-

EDUCATION

B.Sc. Data Science — Goa Business School, Goa University July 2023 – May 2026

CGPA: 7.3/10

Relevant Coursework: Data Analytics, Statistics, Database Management Systems (DBMS), Advanced SQL, Big Data, Cloud Computing, Marketing Analytics

Class XII (HSC) — St. Xavier's Higher Secondary School, Mapusa May 2023

CERTIFICATIONS

- HackerRank SQL (Intermediate)
- Data Analytics & Visualization Job Simulation — Accenture North America (Forage)
